Summary

Software Engineer with **3+** years of experience building **scalable, distributed** backend systems using **Java (8/17/21), Spring Boot, and microservices**. **Google Cloud and Oracle Cloud certified**, with hands-on experience designing cloud-native architectures in travel, distribution and fintech domains, emphasizing performance, reliability, and system design.

Skills

Languages: Java (8/17/21), Ruby, C/C++, Python

Frameworks: Spring Boot, Rails, Microservices, gRPC, Apache Kafka

Cloud: Google Cloud Platform (GCE, GKE, Pub/Sub, Spanner), Oracle Cloud Infrastructure

Databases: MySQL, Oracle SQL, PostgreSQL, Cloud Spanner, Cloud Datastore

Devops & Tools: Git, GitHub Actions, Jenkins, Docker, Linux

Concepts: Distributed systems, concurrency, caching strategies, system reliability, performance optimization

Experience

Sabre Corporation — Software Development Engineer II

Jan 2023 – Present

- Enhanced the Hotel Lodging flow to support alphanumeric RC and CI, **increasing** contractual rate plans by **~45%**.
- Migrated core reservation workflows to Google Cloud Platform, improving observability, operational resilience, and production reliability, contributing to cost savings of **~\$150K annually**.
- Designed and integrated an Air France subscription validation service using Java 17, Spring Boot, REST, gRPC, Pub/Sub, and internal MQ systems, reducing compute cost by **~65%**.
- Implemented resiliency patterns and optimized concurrency for high-volume, latency-sensitive execution paths, reducing latency from **19s to ~14ms**.
- Designed and executed performance test suites (stress, spike, soak) using JMeter, validating system stability under **~5K TPS** production-scale load.

Yubi (CredAvenue) — Software Development Intern

May 2022 – Dec 2022

- Developed backend services for the YubiBonds fintech platform using Ruby on Rails, powering APIs handling **100K+ requests/day**.
- Built an event-driven email notification pipeline using AWS messaging services for trade and inventory events.

CYSCOM VIT Chennai — Chapter Lead (Cybersecurity Community)

Dec 2019 - Nov 2022

- Led an AICTE-recognized cybersecurity community with **1200+** contributors, organizing hackathons, workshops, and CTF mentoring programs.
- Mentored **200+** members on cybersecurity fundamentals, problem solving, and competitive security challenges.

Projects

Unified Marketing Gateway

Java — Spring Boot — Kafka — Webflux

- Built a state-driven, idempotent notification platform supporting Telegram, WhatsApp, and SMS, with Kafka-backed durable ingestion, delivery tracking, and reconciliation.
- Implemented state-driven fan-out, retries, and fallback routing to ensure reliable, duplicate-free message delivery.
- Added metrics and observability to track ingestion lag, latency, failures, and delivery states.

Smart Waste Management

AWS IOT — Nodejs — NodeRed — MQTT

- Built an IoT-based monitoring platform using sensor-enabled bins publishing data via AWS IoT (MQTT) for real-time visibility.
- Designed lightweight MQTT topics and payloads for reliable, low-bandwidth device communication.

Certifications

OCI Architect Associate — Nov 2025 - Nov 2027

Google Cloud Associate Cloud Engineer — Nov 2024 - Nov 2027

Education

B.Tech in Computer Science and Engineering

Vellore Institute of Technology

2019 – 2023 — CGPA: 9.0
